Lithium ion cells for Aerospace applications
LVP series

Overview
The LVP family of Lithium ion cells is optimized for high reliability and low maintenance uses. The cell design is based on our state of the art technology and extensive experiences.

Features
- High energy density
- Excellent discharge characteristics
- Sealed Structure
- No need for maintenance such as electrolyte filling or conditioning cycles
- Low self discharge

Applications
- Aircrafts
- Other high reliability applications

Technology
- Lithium Cobalt Oxide cathode material:
  Provides the best combination of high reliability, high energy storage, and long life.
- Prismatic shape:
  Allows high packaging efficiency of multi-cell battery

Cell construction

Cell Characteristics

Safety and Handling information
To insure personnel safety and specified product performance, read and understand the LVP Instruction Manual before handling, testing, or installing the cells. Inappropriate handling or application of the cells can result in reduced cell life and performance, electrolyte leakage, high cell temperatures, and even the possibility of smoke generation and fire.
GS Yuasa strongly recommends that LVP cells be utilized with appropriate battery protection circuitry. Recommended protection circuitry requirements are available upon request. GS Yuasa can also provide battery systems, complete with cell balancing, monitoring and protection electronics for your specific application.
Cell design details and specifications are subject to change without notice.
